Rivermont®ORCHIDS
SIGNAL MOUNTAIN, TENNESSEE**POLLEN****\$10.00 per grain**

Since the dawn of civilization, man has been constantly striving to improve and modify his environment. This effort is constant - whether it be in social relationships, shelter, food, or conveniences which will make his life more comfortable.

While the advent of scientific research has contributed immeasurably to man's progress, there are still many unknown factors and mysteries surrounding the cause and effect of the things that we do. Over the years, plant and animal breeders have combined as parents the best of what they had to work with. This is particularly true of orchids. All of us know that the hybrids of today are far superior to the hybrids which were available 25 - 50 years ago. Even with the great strides made by geneticists, visual examination to select color, flower size, compactness of growth, floriferousness, and vigorous growth continues to be equally important.

It is an accepted fact that Rivermont possesses one of the largest collections of breeding plants in the world and our hybrid seedlings have generally proven to be producers of superior flowers. In order to extend to our friends and customers the privilege of utilizing the potentials of some of our breeding plants, we are offering pollen for sale. Possibly you have a plant which produces outstanding flowers and want to try making your own cross. While a gamble, the chances are you could produce something worthwhile!

The availability of pollen is limited, and since hybridizing is not a sure thing, we cannot make a guarantee that if you use our pollen with one of your plants, it will produce viable seed. Upon request, complete parentage chart can be supplied with each pollen purchase. When ordering, please specify cross number and name. \$10.00 per pollen grain. Limit of two grains of pollen of any one parent to a customer.
